## SUMMARY

---

Results-driven Senior Site Reliability and Platform Engineer with 9+ years of experience designing, automating, and operating highly available cloud infrastructure and Kubernetes platforms across AWS, GCP, Azure, and bare-metal environments. Proven expertise in Infrastructure as Code using Terraform/Terragrunt, Kubernetes platform operations, CI/CD automation, observability, and production incident response. Built and operated mission-critical infrastructure supporting 70+ blockchain networks with 99.99% SLA while reducing operational toil through automation and improving engineering productivity through reusable platform tooling.

## TECHNICAL SKILLS

---

**Cloud & Infra** | AWS, GCP, Azure, Bare Metal, AWS Outposts  
**Containers & Platform** | Kubernetes (CKA, CKAD, CKS), Amazon EKS, Docker, Helm, ArgoCD  
**Infrastructure as Code** | Terraform, Terragrunt, Ansible  
**CI/CD** | GitHub Actions, CircleCI, Jenkins, GitLab CI  
**Observability** | Prometheus, Grafana, Loki, Tempo, VictoriaMetrics, OpenTelemetry, New Relic  
**Messaging & Data** | Kafka, Debezium, AWS DMS, Redshift, Snowflake Openflow  
**Networking** | VPC, Load Balancers, gRPC, TCP/IP, HTTP/2, Cilium, Calico  
**Programming** | Go, Python, Bash, SQL, TypeScript  
**Developer Productivity** | AI-assisted engineering (ChatGPT, Claude, AWS Bedrock, GitHub Copilot), Platform Automation

## PLATFORM ENGINEERING HIGHLIGHTS

---

- Designed and operated production Kubernetes platforms across AWS, GCP, Azure, and bare-metal environments
- Built reusable Terraform modules and GitOps workflows using Helm and ArgoCD
- Established end-to-end observability with Victoria Metrics, Grafana, Victoria Logs, Tempo, and OpenTelemetry
- Led production incident response and reliability improvements for mission-critical systems with 99.99% SLA

## EXPERIENCE

---

### Senior DevOps Engineer | ProphetX

Feb 2022 - Present

#### *Sports Betting Platform*

- Designed and operated production Amazon EKS clusters supporting regulated sports betting workloads
- Built reusable Terraform modules for AWS infrastructure provisioning across multiple environments with Terragrunt
- Implemented GitOps deployment workflows using GitHub Action, ArgoCD and Helm
- Built event-driven data platforms using Kafka, Debezium, AWS DMS, Redshift, and Snowflake Openflow.
- Built Reporting workflow with Apache Airflow to generate reports and upload to Nasdaq.
- Reduced AWS infrastructure costs by 40% through rightsizing, autoscaling, and infrastructure optimization
- Implemented end-to-end observability using Victoria Metrics, Victoria Logs, Tempo, Grafana and New Relic

### Head of Site Reliability Engineering | Belle AI

Oct 2021 - Jun 2023

#### *AI-powered Healthcare Solutions*

- Led a Site Reliability Engineering team responsible for the reliability, scalability, and security of AI infrastructure across AWS, Azure, and GCP.
- Implemented MLOps pipelines using Model Mesh and NVIDIA Triton Server, reducing model deployment time from weeks to hours
- Built multi-cloud Kubernetes infrastructure (Azure, AWS, GCP) with GPU optimization, improving inference performance by 25%
- Established HIPAA-compliant infrastructure using Terraform/Terragrunt with encryption, audit logging, and access controls

- Maintained data pipelines for AWS Data Lake using Glue, Lambda, Spark, and Python for ETL supporting AI model training
- Deployed LGTM observability stack (Loki, Grafana, Tempo, Mimir) for unified logging, metrics, and tracing

## **DevOps Manager | VNDirect Securities Corporation**

**Aug 2021 - Aug 2022**

*Securities Brokerage & Financial Services*

- Directed team managing 2000+ VMs across Kubernetes and on-premise environments for trading systems
- Implemented configuration management at scale using Puppet and Ansible for consistent system configurations
- Deployed on-premise Kafka clusters for real-time market data streaming with high-availability architecture
- Maintained 99.95% uptime for mission-critical financial trading infrastructure

## **Senior DevOps Engineer | TomoChain**

**Nov 2018 - Nov 2019**

*Blockchain Platform for dApps*

- Launched and maintained validator nodes and DEX infrastructure on mainnet with 99.9%+ uptime
- Managed validator infrastructure with secure key management and consensus participation for PoS network
- Built DevOps tooling enabling community to deploy nodes and integrate with blockchain network
- Implemented monitoring with Prometheus/Grafana for validator performance and network health

## **Senior DevOps Engineer | Linagora**

**Feb 2020 - Oct 2020**

*Open Source Software - Apache James Contributor*

- Operated OpenPaaS platform on OVH cloud with Apache James, managing Linux systems at scale
- Created automation framework combining Terraform, Ansible, and Helm for rapid Kubernetes provisioning

## **DevOps Engineer | Various Consulting Companies**

**2016 - 2018**

*IT Consulting & Software Development*

- Engineered CI/CD solutions for .NET, Java, and JavaScript applications using Jenkins and TeamCity
- Developed AWS automation with Python/Node.js and implemented infrastructure as code with Terraform

## **EDUCATION**

---

|                                                                                                                 |      |
|-----------------------------------------------------------------------------------------------------------------|------|
| <b>Vietnam National University of Hanoi</b> - Master of Science, Data Communication & Computer Networks         | 2019 |
| <b>University of Transport and Communications</b> - Bachelor of Science, Data Communication & Computer Networks | 2011 |
